

Rainwater Harvesting Tank Monitoring Unit - Basic model (no graphics)

- IP54 rated enclosure measuring 220 x 170 x 120mm deep
- Fitted with digital totaliser to display volume of rainwater used
- Key operated re-set switch to zero the totaliser
- Fitted with digital process meter to display tank water level (% full)
- Needs 230v 1amp supply

The unit requires inputs from 1 or 2 (depending on system type) pulsed-output water meters for reading volume and a pressure transducer for reading tank level, all of which we can also supply.

Other larger models are available with either our generic graphic images mounted or a bespoke image created by our graphic designer. Please ask for details.
